STATE OF NORTH CAROLINA
DEPARTMENT OF ENVIRONMENT AND NATURAL RESOURCES
DIVISION OF WATER QUALITY

GENERAL PERMIT NO. NCG210000

TO DISCHARGE STORMWATER UNDER THE
NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM

For establishments primarily engaged in manufacturing:

Lumber and Wood Products

In compliance with the provision of North Carolina General Statute 143-215.1, other lawful standards and regulations promulgated and adopted by the North Carolina Environmental Management Commission and the Federal Water Pollution Control Act, as amended, this permit is hereby issued to all owners or operators, hereinafter permittees, which are covered by this permit as evidenced by receipt of a Certificate of Coverage by the Environmental Management Commission to allow the discharge of stormwater to the surface waters of North Carolina or to a separate storm sewer system conveying discharges to surface waters in accordance with the terms and conditions set forth herein.

Coverage under this General Permit is applicable to:

♦ All owners or operators of stormwater point source discharges associated with establishments primarily engaged in activities classified as Lumber and Wood Products, Except Furniture [Standard Industrial Classification (SIC) 24], including Wood Chip Mills;
♦ Stormwater point source discharges from like industrial activities deemed by The Division of Water Quality (DWQ) to be similar to these operations in the process, or the discharges, or the exposure of raw materials, intermediate products, by-products, products, or waste products.

Except upon DWQ determination of similarity as provided immediately above, the following activities and associated discharges are excluded from coverage under this General Permit:

♦ Establishments primarily engaged in: Logging [SIC 2411]; or manufacturing Wood Kitchen Cabinets [SIC 2434]; or Wood Preserving [SIC 2491].

The General Permit shall become effective on August 1, 2013.

The General Permit shall expire at midnight on July 31, 2018.

Signed this day July 31, 2013.

Original signed by Matt Matthews
for Thomas A. Reeder, Acting Director
Division of Water Quality
By the Authority of the Environmental Management Commission

9. Twenty-four Hour Reporting
10. Other Noncompliance
11. Other Information

PART IV DEFINITIONS
PART I  INTRODUCTION

SECTION A: GENERAL PERMIT COVERAGE

All persons desiring to have facilities covered by this General Permit must register with the Division of Water Quality (DWQ) by the filing of a Notice of Intent (NOI) and applicable fees. The NOI shall be submitted and a certificate of coverage issued prior to any point source discharge of stormwater associated with industrial activity to the surface waters of the state.

Any owner or operator not wishing to be covered or limited by this General Permit may make application for an individual NPDES permit in accordance with NPDES procedures in 15A NCAC 2H .0100, stating the reasons supporting the request. Any application for an individual permit should be made at least 180 days prior to commencement of discharge.

This General Permit does not cover activities or discharges covered by an individual NPDES permit until the individual permit has expired or has been revoked. Any person conducting an activity covered by an individual permit but which could be covered by this General Permit may request that the individual permit be revoked and coverage under this General Permit be provided.

If industrial materials and activities are not exposed to precipitation or runoff as described in 40 CFR §122.26(g), the facility may qualify for a No Exposure Exclusion from NPDES stormwater discharge permit requirements. Any owner or operator wishing to obtain a No Exposure Exclusion must submit a No Exposure Certification Notice of Intent (NOI) form to the Division; must receive approval by the Division; must maintain no exposure conditions unless authorized to discharge under a valid NPDES stormwater permit; and must recertify the No Exposure Exclusion annually.

Any facility may apply for new or continued coverage under this permit until a Total Maximum Daily Load (TMDL) for pollutants for stormwater is established. A TMDL sets a pollutant-loading limit that affects a watershed, or portion of a watershed, draining to a specific impaired water. For discharges to watersheds affected by a TMDL, coverage under this permit may depend on the facility demonstrating it does not have reasonable potential to violate applicable water quality standards for those pollutants as a result of discharges. If DWQ determines that discharges have reasonable potential to cause water quality standard violations, the facility shall apply for an individual permit 180 days prior to the expiration date of this General Permit. Once that individual permit is effective, the facility will no longer have coverage under this General Permit. Note that the permittee must identify impaired waters (scheduled for TMDL development) and waters already subject to a TMDL in the Site Overview, as outlined in the Stormwater Pollution Prevention Plan, Part II, Section A. A list of approved TMDLs for the state of North Carolina can be found at http://portal.ncdenr.org/web/wq/ps/mtu/tmdl.
SECTION B: PERMITTED ACTIVITIES

Until this permit expires or is modified or revoked, the permittee is authorized to discharge stormwater to the surface waters of North Carolina, or separate storm sewer system, which has been treated and managed in accordance with the terms and conditions of this General Permit.

Any other point source discharge to surface waters of the state is prohibited unless it is an allowable non-stormwater discharge or is covered by another permit, authorization, or approval. **The discharges allowed by this General Permit shall not cause or contribute to violations of Water Quality Standards.** This General Permit does not authorize discharges which have been determined by the Division of Water Quality to be wastewater discharges.

This permit does not relieve the permittee from responsibility for compliance with any other applicable federal, state, or local law, rule, standard, ordinance, order, judgment, or decree.
PART II  MONITORING, CONTROLS, AND LIMITATIONS FOR PERMITTED DISCHARGES

SECTION A: STORMWATER POLLUTION PREVENTION PLAN

The permittee shall develop and implement a Stormwater Pollution Prevention Plan (SPPP). The SPPP shall be maintained on site unless exempted from this requirement by the Division. The SPPP is public information in accordance with Part III, Standard Conditions, Section E, paragraph 3 of this permit. The SPPP shall include, at a minimum, the following items:

1. Site Overview. The Site Overview shall provide a description of the physical facility and the potential pollutant sources that may be expected to contribute to contamination of stormwater discharges. The Site Overview shall contain the following:

   (a) A general location map (USGS quadrangle map or appropriately drafted equivalent map), showing the facility’s location in relation to transportation routes and surface waters; the name of the receiving waters to which the stormwater outfalls discharge, or if the discharge is to a municipal separate storm sewer system, the name of the municipality and the ultimate receiving waters; and accurate latitude and longitude of the points of stormwater discharge associated with industrial activity. The general location map (or alternatively the site map) shall identify whether any receiving waters are impaired (on the state’s 303(d) list of impaired waters) or if the site is located in a watershed for which a TMDL has been established, and what the parameters of concern are.

   (b) A narrative description of storage practices, loading and unloading activities, outdoor process areas, dust or particulate generating or control processes, and waste disposal practices. A narrative description of the potential pollutants that could be expected to be present in the stormwater discharge from each outfall.

   (c) A site map drawn at a scale sufficient to clearly depict: the site property boundary; the stormwater discharge outfalls; all on-site and adjacent surface waters and wetlands; industrial activity areas (including storage of materials, disposal areas, process areas, loading and unloading areas, and haul roads); site topography and finished grade; all drainage features and structures; drainage area boundaries and total contributing area for each outfall; direction of flow in each drainage area; industrial activities occurring in each drainage area; buildings; stormwater Best Management Practices (BMPs); and impervious surfaces. The site map must indicate the percentage of each drainage area that is impervious, and the site map must include a graphic scale indication and north arrow.

   (d) A list of significant spills or leaks of pollutants during the previous three (3) years and any corrective actions taken to mitigate spill impacts.

   (e) Certification that the stormwater outfalls have been evaluated for the presence of non-stormwater discharges. The permittee shall re-certify annually that the stormwater outfalls have been evaluated for the presence of non-stormwater discharges. The certification statement will be signed in accordance with the requirements found in Part III, Standard Conditions, Section B, Paragraph 5.
2. **Stormwater Management Strategy.** The Stormwater Management Strategy shall contain a narrative description of the materials management practices employed which control or minimize the stormwater exposure of significant materials, including structural and nonstructural measures. The Stormwater Management Strategy, at a minimum, shall incorporate the following:

   (a) **Feasibility Study.** A review of the technical and economic feasibility of changing the methods of operations and/or storage practices to eliminate or reduce exposure of materials and processes to rainfall and run-on flows. Wherever practical, the permittee shall prevent exposure of all storage areas, material handling operations, and manufacturing or fueling operations. In areas where elimination of exposure is not practical, this review shall document the feasibility of diverting the stormwater run-on away from areas of potential contamination.

   (b) **Secondary Containment Requirements and Records.** Secondary containment is required for: bulk storage of liquid materials including petroleum products; storage in any amount of Section 313 of Title III of the Superfund Amendments and Reauthorization Act (SARA) water priority chemicals; and storage in any amount of hazardous substances, in order to prevent leaks and spills from contaminating stormwater runoff. A table or summary of all such tanks and stored materials and their associated secondary containment areas shall be maintained. If the secondary containment devices are connected to stormwater conveyance systems, the connection shall be controlled by manually activated valves or other similar devices, which shall be secured closed with a locking mechanism. Any stormwater that accumulates in the containment area shall be at a minimum visually observed for color, foam, outfall staining, visible sheens and dry weather flow, prior to release of the accumulated stormwater. Accumulated stormwater shall be released if found to be uncontaminated by any material. Records documenting the individual making the observation, the description of the accumulated stormwater, and the date and time of the release shall be kept for a period of five (5) years. For facilities subject to a federal oil Spill Prevention, Control, and Countermeasure Plan (SPCC), any portion of the SPCC plan fully compliant with the requirements of this permit may be used to demonstrate compliance with this permit.

   (c) **BMP Summary.** A listing of site structural and non-structural Best Management Practices (BMPs) shall be provided. The installation and implementation of BMPs shall be based on the assessment of the potential for sources to contribute significant quantities of pollutants to stormwater discharges and on data collected through monitoring of stormwater discharges. The BMP Summary shall include a written record of the specific rationale for installation and implementation of the selected site BMPs. The BMP Summary shall be reviewed and updated annually.

3. **Spill Prevention and Response Procedures.** The Spill Prevention and Response Procedures (SPRP) shall incorporate an assessment of potential pollutant sources based on a materials inventory of the facility. Facility personnel responsible for implementing the SPRP shall be identified in a written list incorporated into the SPRP and signed and dated by each individual acknowledging their responsibilities for the procedures. A responsible person shall be on-site at all times during facility operations that have increased potential to contaminate stormwater runoff through spills or exposure of materials associated with the facility operations. The SPRP must be site stormwater specific. Therefore, an oil Spill Prevention Control and Countermeasure plan (SPCC) may be a component of the SPRP, but may not be sufficient to completely address the stormwater aspects of the SPRP. The common elements of the SPCC with the SPRP may be incorporated by reference into the SPRP.
4. **Preventative Maintenance and Good Housekeeping Program.** A preventative maintenance and good housekeeping program shall be developed and implemented. The program shall address all stormwater control systems (if applicable), stormwater discharge outfalls, all on-site and adjacent surface waters and wetlands, industrial activity areas (including material storage areas, material handling areas, disposal areas, process areas, loading and unloading areas, and haul roads), all drainage features and structures, and existing structural BMPs. The program shall establish schedules of inspections, maintenance, and housekeeping activities of stormwater control systems, as well as facility equipment, facility areas, and facility systems that present a potential for stormwater exposure or stormwater pollution where not already addressed under another element of the SPPP. Inspection of material handling areas and regular cleaning schedules of these areas shall be incorporated into the program. Timely compliance with the established schedules for inspections, maintenance, and housekeeping shall be recorded and maintained in the SPPP.

5. **Facility Inspections.** Inspections of the facility and all stormwater systems shall occur as part of the Preventative Maintenance and Good Housekeeping Program at a minimum on a semi-annual schedule, once during the first half of the year (January to June), and once during the second half (July to December), with at least 60 days separating inspection dates (unless performed more frequently than semi-annually). These facility inspections are different from, and in addition to, the stormwater discharge characteristic monitoring at the outfalls required in Part II B, C, and D of this permit.

6. **Employee Training.** Training programs shall be developed and training provided at a minimum on an annual basis for facility personnel with responsibilities for: spill response and cleanup, preventative maintenance activities, and for any of the facility’s operations that have the potential to contaminate stormwater runoff. The annual training shall be documented by the signature and printed or typed name of each employee trained.

7. **Responsible Party.** The SPPP shall identify a specific position or positions responsible for the overall coordination, development, implementation, and revision of the SPPP. Responsibilities for all components of the SPPP shall be documented and position assignments provided.

8. **SPPP Amendment and Annual Update.** All aspects of the SPPP shall be reviewed on an annual basis. The permittee shall amend the SPPP whenever there is a change in design, construction, operation, site drainage, maintenance, or configuration of the physical features which may have a significant effect on the potential for the discharge of pollutants to surface waters. The annual update shall include at a minimum:

   (a) an updated list of significant spills or leaks of pollutants for the previous three (3) years, or the notation that no spills have occurred (element of the Site Overview);
   
   (b) a written re-certification that the stormwater outfalls have been evaluated for the presence of non-stormwater discharges (element of the Site Overview);
   
   (c) a documented re-evaluation of the effectiveness of the on-site stormwater BMPs (BMP Summary element of the Stormwater Management Strategy).
   
   (d) a review and comparison of sample analytical data to benchmark values (if applicable) over the past year, including a discussion about Tiered Response status. The permittee shall use the Division’s Annual Summary Data Monitoring Report (DMR) form, available from the Stormwater Permitting Unit’s website (See ‘Monitoring Forms’ here: [http://portal.ncdenr.org/web/lr/npdes-stormwater](http://portal.ncdenr.org/web/lr/npdes-stormwater)).
The Director may notify the permittee when the SPPP does not meet one or more of the minimum requirements of the permit. Within 30 days of such notice, the permittee shall submit a time schedule to the Director for modifying the SPPP to meet minimum requirements. The permittee shall provide certification in writing (in accordance with Part III, Standard Conditions, Section B, Paragraph 5) to the Director that the changes have been made.

9. **SPPP Implementation.** The permittee shall implement the Stormwater Pollution Prevention Plan and all appropriate BMPs consistent with the provisions of this permit, in order to control contaminants entering surface waters via stormwater. Implementation of the SPPP shall include documentation of all monitoring, measurements, inspections, maintenance activities, and training provided to employees, including the log of the sampling data and of actions taken to implement BMPs associated with the industrial activities, including vehicle maintenance activities. Such documentation shall be kept on-site for a period of five (5) years and made available to the Director or the Director’s authorized representative immediately upon request.

**SECTION B: ANALYTICAL MONITORING REQUIREMENTS**

A facility that retains exposed accumulations (either exposed to incident precipitation or exposed to stormwater run on) of sawdust, wood chips, bark, mulch, or other similarly sized material on site for more than seven (7) days is required to monitor and report all the site stormwater discharges for the parameters in Table 1.

The permittee may petition the DWQ Regional Office Surface Water Protection Supervisor to be excused from the required monitoring:

a) upon a DWQ Compliance Evaluation Inspection, and;

b) on the basis that DWQ concludes that taken as a whole, site-wide conditions support the assessment of very limited risk of stormwater pollution from the site.

c) Among any other factors deemed relevant in his or her own considerations, the Regional Office Supervisor shall consider whether the amount of accumulated exposed materials may be deemed de minimis with respect to the potential to generate stormwater runoff pollutants. Given that all site conditions may be relevant to the determination of what constitutes a de minimis amount, such determinations shall be made on a ‘case-by-case basis’, and shall not be assumed to be generally, or specifically, transferrable to any other permitted site, regardless of superficial similarities.

d) The Regional Office Supervisor will communicate any such determination in writing, and shall state any qualifying conditions for the permittee’s continuing release from monitoring. DWQ’s release letter may remain in effect through subsequent reissued versions of this permit, unless the release letter provides for other conditions or duration.

e) If released from monitoring, the permittee must still continue to submit semi-annual Discharge Monitoring Reports, with the notation: “Released from Monitoring by DWQ Regional Office.”

If at any time there are changes to DWQ’s initial site assessment, or to the initial site operating circumstances, the permittee must immediately begin analytical monitoring and reporting in accordance with **Tables 1 and 2**, and must immediately inform the DWQ Regional Office that analytical monitoring has been instituted.

</tr>
<tr>
<td>Total Rainfall⁴</td>
<td>inches</td>
<td>semi-annual</td>
<td>Rain gauge</td>
<td>-</td>
</tr>
</tbody>
</table>

Footnotes:
1  Measurement Frequency: Twice per year (unless other provisions of this permit prompt monthly sampling) during a measurable storm event, until either another permit is issued for this facility or until this permit is revoked or rescinded. See Table 2 for schedule of monitoring periods through the end of this permitting cycle. If the facility is monitoring monthly because of Tier Two or Three response actions under the previous General Permit, the facility should continue a monthly monitoring and reporting schedule.
2  Grab samples shall be collected within the first 30 minutes of discharge.
3  Sample Location: Samples shall be collected at each stormwater discharge outfall (SDO) unless representative outfall status (ROS) has been granted. A copy of the DWQ letter granting ROS shall be kept on site.
4  For each sampled measurable storm event, the total precipitation must be recorded. An on-site rain gauge reading must be recorded. Where isolated sites are unmanned for extended periods of time, a local rain gauge reading may be substituted for an on-site reading.

All analytical monitoring shall be performed during a measurable storm event at each stormwater discharge outfall (SDO).

A measurable storm event is a storm event that results in an actual discharge from the permitted site outfall. The previous measurable storm event must have been at least 72 hours prior. The 72-hour storm interval does not apply if the permittee is able to document that a shorter interval is representative for local storm events during the sampling period, and the permittee obtains approval from the local DWQ Regional Office. See Definitions.

A minimum of 60 days must separate Period 1 and Period 2 sample dates unless monthly monitoring has been instituted under other requirements of this permit.

The permittee shall complete the analytical samplings in accordance with the schedule specified in Table 2, unless adverse weather conditions prevent sample collection (see Adverse Weather in Definitions). Inability to sample because of adverse weather conditions must be documented in the SPPP and recorded on the DMR. Sampling is not required outside of the facility’s normal operating hours.

Failure to monitor and report semi-annually per permit terms may result in the Division requiring monthly monitoring and reporting for all parameters for a specified time period. “No discharge” from an outfall or inability to collect a sample because of adverse weather conditions during a monitoring period, for example, does not constitute failure to monitor, as long as it is properly reported.

</tbody>
</table>

Footnotes:
1. Maintain semi-annual monitoring and reporting during permit renewal process unless other provisions of this permit prompt monthly sampling.
2. If no discharge occurs during the sampling period, the permittee must submit a monitoring report indicating “No Flow” or “No Discharge” within 30 days of the end of the sampling period.

The permittee must report the results from each sample taken within the monitoring period (See Part III E). However, for purposes of benchmark comparison and Tiered response actions, the permittee shall use the analytical results from the first sample with valid results within the monitoring period.

The permittee shall compare monitoring results to the benchmark values in Table 3. The benchmark values in Table 3 are not permit limits, but should be used as guidelines for implementation of the permittee’s SPPP. Exceedances of benchmark values require the permittee to increase monitoring and reporting, increase management actions, increase record keeping, and/or install stormwater Best Management Practices (BMPs) in a tiered program. See descriptions of Tier One, Tier Two, and Tier Three response actions below. In the event that the Division releases the permittee from continued monthly monitoring and reporting under Tier Two or Tier Three, DWQ’s release letter may remain in effect through subsequent reissuance of this permit, unless the release letter provides for other conditions or duration.

<td>6. Note: Benchmark exceedances for a different parameter separately trigger the several tiered response requirements.</td>
</tr>
</tbody>
</table>

**Tier Two**

<table>
<thead>
<tr>
<th>If: The <strong>first valid sampling results</strong> from two consecutive monitoring periods are above the benchmark values for any specific parameter at a specific discharge outfall;</th>
<th>Then: The permittee shall:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>1. Repeat all the required actions outlined above in <strong>Tier One.</strong></td>
</tr>
<tr>
<td></td>
<td>2. Immediately institute monthly monitoring and reporting for all parameters at every outfall where a sampling result exceeded the benchmark value for two consecutive samples. Monthly (analytical and qualitative) monitoring and reporting shall continue until three consecutive sample results are below the benchmark values.</td>
</tr>
<tr>
<td></td>
<td>3. If no discharge occurs during the sampling period, the permittee is required to submit a monthly monitoring report indicating “No Flow” to comply with reporting requirements.</td>
</tr>
<tr>
<td></td>
<td>4. <strong>Alternatively,</strong> in lieu of steps 2 and 3, the permittee may, after two consecutive exceedances, exercise the option of contacting the DWQ Regional Office Supervisor as provided below in Tier Three. The Regional Office Supervisor may direct the response actions on the part of the permittee as provided in Tier Three, including reduced or additional sampling parameters or frequency.</td>
</tr>
<tr>
<td></td>
<td>5. Maintain a record of the <strong>Tier Two</strong> response in the SPPP.</td>
</tr>
<tr>
<td></td>
<td>6. Continue <strong>Tier Two</strong> response obligations throughout the permit COC renewal process.</td>
</tr>
</tbody>
</table>

**Tier Three**

| If the valid sampling results required for the permit monitoring periods exceed the benchmark value for any specific parameter at any specific outfall on **four occasions,** the permittee shall notify the DWQ Regional Office Supervisor in writing **within 30 days of receipt** of the fourth analytical results. **DWQ may but is not limited to:** |
|---|---|
| | • require the permittee to revise, increase, or decrease the monitoring and reporting frequency for some or all parameters required herein, including requiring sampling of additional or substitute parameters; |
| | • rescind coverage under the General Permit, and require that the permittee apply for an individual stormwater discharge permit; |
| | • require the permittee to install structural stormwater controls; |
| | • require the permittee to implement other stormwater control measures; |
| | • require the permittee to perform upstream and downstream monitoring to characterize impacts on receiving waters; |
| | • require the permittee implement site modifications to qualify for a No Exposure Exclusion; or |
| | • require the permittee to continue Tier Three obligations through the permit COC renewal process, and possibly into the next permit cycle. |
SECTION C: QUALITATIVE MONITORING REQUIREMENTS

All facilities covered by this permit must perform Qualitative Monitoring. The purpose of qualitative monitoring is to evaluate the effectiveness of the SPPP and to assess new sources of stormwater pollution. Qualitative monitoring of stormwater outfalls must be performed during a measurable storm event.

Qualitative monitoring requires a visual inspection of each stormwater outfall associated with industrial activity regardless of representative outfall status. Qualitative monitoring shall be performed semi-annually as specified in Table 4, and during required analytical monitoring events if applicable (unless the permittee is required to perform further qualitative sampling per the Qualitative Monitoring Response below). Inability to sample because of adverse weather conditions must be documented in the SPPP and recorded on the DMR (see Adverse Weather in Definitions). Only SDOs discharging stormwater associated with industrial activity must be monitored (See Definitions).

In the event an atypical condition is noted at a stormwater discharge outfall, the permittee shall document the suspected cause of the condition and any actions taken in response to the discovery. This documentation will be maintained with the SPPP.

</tbody>
</table>

Footnotes:

¹ Measurement Frequency: Twice per year (unless other provisions of this permit prompt monthly sampling) during a measurable storm event. See Table 2 for schedule of monitoring periods. The permittee must continue qualitative monitoring throughout the permit renewal process.

² Monitoring Location: Qualitative monitoring shall be performed at each stormwater discharge outfall (SDO) associated with industrial activity, regardless of representative outfall status (ROS).

A minimum of 60 days must separate monitoring dates, unless additional sampling has been instituted as part of other analytical monitoring requirements in this permit.

If the permittee’s qualitative monitoring indicates that existing stormwater BMPs are ineffective, or that significant stormwater contamination is present, the permittee shall investigate potential causes, evaluate the feasibility of corrective actions, and implement those corrective actions within 60 days, per the
Qualitative Monitoring Response, below. A written record of the permittee’s investigation, evaluation, and response actions shall be kept in the SPPP.

<table>
<thead>
<tr>
<th>Qualitative Monitoring Response</th>
</tr>
</thead>
<tbody>
<tr>
<td>Qualitative monitoring is for the purposes of evaluating SPPP effectiveness, assessing new sources of stormwater pollution, and prompting the permittee’s response to pollution. If the permittee repeatedly fails to respond effectively to correct problems identified by qualitative monitoring, or if the discharge causes or contributes to a water quality standard violation, DWQ may but is not limited to:</td>
</tr>
<tr>
<td>• require that the permittee revise, increase, or decrease monitoring frequency for some or all parameters (analytical or qualitative);</td>
</tr>
<tr>
<td>• require the permittee to install structural stormwater controls;</td>
</tr>
<tr>
<td>• require the permittee to implement other stormwater control measures;</td>
</tr>
<tr>
<td>• require the permittee to perform upstream and downstream monitoring to characterize impacts on receiving waters; or</td>
</tr>
<tr>
<td>• require the permittee implement site modifications to qualify for a No Exposure Exclusion.</td>
</tr>
</tbody>
</table>

SECTION D: ON-SITE VEHICLE MAINTENANCE MONITORING REQUIREMENTS

Facilities that have any vehicle maintenance activity occurring on-site which uses more than 55 gallons of new motor oil and hydraulic oil per month, combined, when averaged over the calendar year shall perform analytical monitoring as specified below in Table 5. All analytical monitoring shall be performed during a measurable storm event at all stormwater discharge outfalls (SDOs) that discharge stormwater runoff from vehicle maintenance areas.

Footnotes:
¹ Measurement Frequency: Twice per year (unless other provisions of this permit prompt monthly sampling) during a measurable storm event, until either another permit is issued for this facility or until this permit is revoked or rescinded. If the facility is monitoring monthly because of Tier Two or Three response actions under the previous General Permit, the facility should continue a monthly monitoring and reporting schedule.
² Grab samples shall be collected within the first 30 minutes of discharge.
3 Sample Location: Samples shall be collected at each stormwater discharge outfall (SDO) that discharges stormwater runoff from area(s) where vehicle maintenance activities occur, unless representative outfall status (ROS) has been granted. A copy of the letter granting ROS shall be kept on site.

4 For each sampled measureable storm event, the total precipitation must be recorded. An on-site rain gauge reading must be recorded. Where isolated sites are unmanned for extended periods of time, a local rain gauge reading may be substituted for an on-site reading.

The permittee shall complete the analytical samplings in accordance with the schedule specified in Table 2, unless adverse weather conditions prevent sample collection (see Adverse Weather in Definitions). Inability to sample because of adverse weather conditions must be documented in the SPPP and recorded on the DMR. Sampling is not required outside of the facility’s normal operating hours.

Failure to monitor and report semi-annually per permit terms may result in the Division requiring monthly monitoring for all parameters for a specified time period. “No discharge” from an outfall or inability to collect a sample because of adverse weather conditions during a monitoring period, for example, does not constitute failure to monitor, as long as it is properly reported.

The permittee shall compare monitoring results to the benchmark values in Table 6. Exceedances of benchmark values require the permittee to increase monitoring, increase management actions, increase record keeping, and/or install stormwater Best Management Practices (BMPs) in a tiered program. See descriptions of Tier One, Tier Two, and Tier Three response actions in Part II Section B above. In the event that the Division releases the permittee from continued monthly monitoring under Tier Two or Tier Three, DWQ’s release letter may remain in effect through subsequent reissuance of this permit, unless the release letter provides for other conditions or duration.

The permittee must report the results from each sample taken within the monitoring period (See Part III E). However, for purposes of benchmark comparison and Tiered response actions, the permittee shall use the analytical results from the first sample with valid results within the monitoring period.

PART III     STANDARD CONDITIONS FOR NPDES STORMWATER GENERAL PERMITS

SECTION A: COMPLIANCE AND LIABILITY

1. Compliance Schedule

The permittee shall comply with Limitations and Controls specified for stormwater discharges in accordance with the following schedule:

Existing Facilities already operating but applying for permit coverage for the first time: The Stormwater Pollution Prevention Plan shall be developed and implemented within 12 months of the effective date of the Certificate of Coverage and updated thereafter on an annual basis. Secondary containment, as specified in Part II, Section A, Paragraph 2(b) of this general permit, shall be accomplished within 12 months of the effective date of the issuance of the Certificate of Coverage.

New Facilities applying for coverage for the first time: The Stormwater Pollution Prevention Plan shall be developed and implemented prior to the beginning of discharges from the operation of the industrial activity and be updated thereafter on an annual basis. Secondary containment, as specified in Part II, Section A, Paragraph 2(b) of this general permit shall be accomplished prior to the beginning of discharges from the operation of the industrial activity.

Existing facilities previously permitted and applying for renewal under this General Permit:
All requirements, conditions, limitations, and controls contained in this permit (except new SPPP elements in this permit renewal) shall become effective immediately upon issuance of the Certificate of Coverage. New elements of the Stormwater Pollution Prevention Plan for this permit renewal shall be developed and implemented within 6 months of the effective date of this general permit and updated thereafter on an annual basis. Secondary containment, as specified in Part II, Paragraph 2(b) of this general permit shall be accomplished prior to the beginning of discharges from the operation of the industrial activity.

2. Duty to Comply

The permittee must comply with all conditions of this general permit. Any permit noncompliance constitutes a violation of the Clean Water Act (CWA) and is grounds for enforcement action; for permit termination, revocation and reissuance, or modification; or denial of a permit upon renewal application [40 CFR 122.41].

a. The permittee shall comply with standards or prohibitions established under section 307(a) of the CWA for toxic pollutants within the time provided in the regulations that establish these standards or prohibitions, even if the general permit has not yet been modified to incorporate the requirement.

b. The CWA provides that any person who violates section[s] 301, 302, 306, 307, 308, 318 or 405 of the Act, or any permit condition or limitation implementing any such sections in a permit issued under section 402, or any requirement imposed in a pretreatment program approved under sections 402(a)(3) or 402(b)(8) of the Act, is subject to a civil penalty not to exceed $37,500 per day for each violation. [33 USC 1319(d) and 40 CFR 122.41(a)(2)]

c. The CWA provides that any person who negligently violates sections 301, 302, 306, 307, 308, 318, or 405 of the Act, or any condition or limitation implementing any of such sections in a permit issued under section 402 of the Act, or any requirement imposed in a pretreatment program approved under section 402(a)(3) or 402(b)(8) of the Act, is subject to criminal penalties of $2,500 to $25,000 per day of violation, or imprisonment of not more than 1 year, or
both. In the case of a second or subsequent conviction for a negligent violation, a person shall be subject to criminal penalties of not more than $50,000 per day of violation, or by imprisonment of not more than 2 years, or both. [33 USC 1319(c)(1) and 40 CFR 122.41(a)(2)]

d. Any person who knowingly violates such sections, or such conditions or limitations is subject to criminal penalties of $5,000 to $50,000 per day of violation, or imprisonment for not more than 3 years, or both. In the case of a second or subsequent conviction for a knowing violation, a person shall be subject to criminal penalties of not more than $100,000 per day of violation, or imprisonment of not more than 6 years, or both. [33 USC 1319(c)(2) and 40 CFR 122.41(a)(2)]

e. Any person who knowingly violates section 301, 302, 303, 306, 307, 308, 318 or 405 of the Act, or any permit condition or limitation implementing any of such sections in a permit issued under section 402 of the Act, and who knows at that time that he thereby places another person in imminent danger of death or serious bodily injury, shall, upon conviction, be subject to a fine of not more than $250,000 or imprisonment of not more than 15 years, or both. In the case of a second or subsequent conviction for a knowing endangerment violation, a person shall be subject to a fine of not more than $500,000 or by imprisonment of not more than 30 years, or both. An organization, as defined in section 309(c)(3)(B)(iii) of the CWA, shall, upon conviction of violating the imminent danger provision, be subject to a fine of not more than $1,000,000 and can be fined up to $2,000,000 for second or subsequent convictions. [40 CFR 122.41(a)(2)]

f. Under state law, a civil penalty of not more than $25,000 per violation may be assessed against any person who violates or fails to act in accordance with the terms, conditions, or requirements of a permit. [North Carolina General Statutes § 143-215.6A]

g. Any person may be assessed an administrative penalty by the Administrator for violating section 301, 302, 306, 307, 308, 318 or 405 of this Act, or any permit condition or limitation implementing any of such sections in a permit issued under section 402 of this Act. Administrative penalties for Class I violations are not to exceed $16,000 per violation, with the maximum amount of any Class I penalty assessed not to exceed $37,500. Penalties for Class II violations are not to exceed $16,000 per day for each day during which the violation continues, with the maximum amount of any Class II penalty not to exceed $177,500. [33 USC 1319(g)(2) and 40 CFR 122.41(a)(3)]

3. Duty to Mitigate
The permittee shall take all reasonable steps to minimize or prevent any discharge in violation of this general permit which has a reasonable likelihood of adversely affecting human health or the environment [40 CFR 122.41(d)].

4. Civil and Criminal Liability
Except as provided in Part III, Section C of this general permit regarding bypassing of stormwater control facilities, nothing in this permit shall be construed to relieve the permittee from any responsibilities, liabilities, or penalties for noncompliance pursuant to NCGS143-215.3,143-215.6, or Section 309 of the Federal Act, 33 USC 1319. Furthermore, the permittee is responsible for consequential damages, such as fish kills, even though the responsibility for effective compliance may be temporarily suspended.

5. Oil and Hazardous Substance Liability
Nothing in this general permit shall be construed to preclude the institution of any legal action or relieve the permittee from any responsibilities, liabilities, or penalties to which the permittee is or may be subject to under NCGS143-215.75 et seq. or Section 311 of the Federal Act, 33 USC 1321.
6. **Property Rights**
The issuance of this general permit does not convey any property rights in either real or personal property, or any exclusive privileges, nor does it authorize any injury to private property or any invasion of personal rights, nor any infringement of Federal, State or local laws or regulations [40 CFR 122.41(g)].

7. **Severability**
The provisions of this general permit are severable, and if any provision of this general permit, or the application of any provision of this general permit to any circumstances, is held invalid, the application of such provision to other circumstances, and the remainder of this general permit, shall not be affected thereby [NCGS 150B‐23].

8. **Duty to Provide Information**
The permittee shall furnish to the Permit Issuing Authority, within a reasonable time, any information which the Permit Issuing Authority may request to determine whether cause exists for modifying, revoking and reissuing, or terminating the general permit issued pursuant to this general permit or to determine compliance with this general permit. The permittee shall also furnish to the Permit Issuing Authority upon request, copies of records required to be kept by this general permit [40 CFR 122.41(h)].

9. **Penalties for Tampering**
The Clean Water Act provides that any person who falsifies, tampers with, or knowingly renders inaccurate, any monitoring device or method required to be maintained under this general permit shall, upon conviction, be punished by a fine of not more than $10,000 per violation, or by imprisonment for not more than two years per violation, or by both. If a conviction of a person is for a violation committed after a first conviction of such person under this paragraph, punishment is a fine of not more than $20,000 per day of violation, or by imprisonment of not more than 4 years, or both [40 CFR 122.41].

10. **Penalties for Falsification of Reports**
The Clean Water Act provides that any person who knowingly makes any false statement, representation, or certification in any record or other document submitted or required to be maintained under this general permit, including monitoring reports or reports of compliance or noncompliance shall, upon conviction, be punished by a fine of not more than $10,000 per violation, or by imprisonment for not more than two years per violation, or by both [40 CFR 122.41].

11. **Onshore or Offshore Construction**
This general permit does not authorize or approve the construction of any onshore or offshore physical structures or facilities or the undertaking of any work in any navigable waters.

12. **Duty to Reapply**
Dischargers covered by this general permit need not submit a new Notice of Intent (NOI) or renewal request unless so directed by the Division. If the Division chooses not to renew this general permit, the permittee will be notified to submit an application for an individual permit [15A NCAC 02H .0127(e)].

**SECTION B: GENERAL CONDITIONS**

1. **General Permit Expiration**
General permits will be effective for a term not to exceed five years, at the end of which the Division may renew them after all public notice requirements have been satisfied. If a general permit is renewed, existing permittees do not need to submit a renewal request or pay a renewal fee unless directed by the Division. New applicants seeking coverage under a renewed general permit must
submit a Notice of Intent to be covered and obtain a Certificate of Coverage under the renewed general permit [15A NCAC 02H.0127(e)].

2. **Transfers**
   This general permit is not transferable to any person without prior written notice to and approval from the Director in accordance with 40 CFR 122.61. The Director may condition approval in accordance with NCGS 143-215.1, in particular NCGS 143-215.1(b)(4)b.2., and may require modification or revocation and reissuance of the Certificate of Coverage, or a minor modification, to identify the new permittee and incorporate such other requirements as may be necessary under the CWA [40 CFR 122.41(l)(3), 122.61] or state statute. **The Permittee is required to notify the Division in writing in the event the permitted facility is sold or closed.**

3. **When an Individual Permit May Be Required**
   The Director may require any owner/operator authorized to discharge under a certificate of coverage issued pursuant to this general permit to apply for and obtain an individual permit or an alternative general permit. Any interested person may petition the Director to take action under this paragraph. Cases where an individual permit may be required include, but are not limited to, the following:
   
   a. The discharger is a significant contributor of pollutants;
   b. Conditions at the permitted site change, altering the constituents and/or characteristics of the discharge such that the discharge no longer qualifies for a general permit;
   c. The discharge violates the terms or conditions of this general permit;
   d. A change has occurred in the availability of demonstrated technology or practices for the control or abatement of pollutants applicable to the point source;
   e. Effluent limitations are promulgated for the point sources covered by this general permit;
   f. A water quality management plan containing requirements applicable to such point sources is approved after the issuance of this general permit;
   g. The Director determines at his or her own discretion that an individual permit is required.

4. **When an Individual Permit May Be Requested**
   Any permittee operating under this general permit may request to be excluded from the coverage of this general permit by applying for an individual permit. When an individual permit is issued to an owner/operator the applicability of this general permit is automatically terminated on the effective date of the individual permit.

5. **Signatory Requirements**
   All applications, reports, or information submitted to the Permitting Issuing Authority shall be signed and certified [40 CFR 122.41(k)].
   
   a. All Notices of Intent to be covered under this general permit shall be signed as follows:
      
      (1) For a corporation: by a responsible corporate officer. For the purpose of this Section, a responsible corporate officer means: (a) a president, secretary, treasurer or vice president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision making functions for the corporation, or (b) the manager of one or more manufacturing, production, or operating facilities, provided, the manager is authorized to make management decisions which govern the operation of the regulated facility including having the explicit or implicit duty of making major capital investment recommendations, and initiating and directing other comprehensive measures to assure long term environmental compliance with environmental laws and regulations; the manager can ensure that the necessary systems are established or actions taken to gather complete
and accurate information for permit application requirements; and where authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures.

(2) For a partnership or sole proprietorship: by a general partner or the proprietor, respectively; or

(3) For a municipality, State, Federal, or other public agency: by either a principal executive officer or ranking elected official [40 CFR 122.22].

b. All reports required by the general permit and other information requested by the Permit Issuing Authority shall be signed by a person described in paragraph a. above or by a duly authorized representative of that person. A person is a duly authorized representative only if:

(1) The authorization is made in writing by a person described above;

(2) The authorization specified either an individual or a position having responsibility for the overall operation of the regulated facility or activity, such as the position of plant manager, operator of a well or well field, superintendent, a position of equivalent responsibility, or an individual or position having overall responsibility for environmental matters for the company. (A duly authorized representative may thus be either a named individual or any individual occupying a named position.); and

(3) The written authorization is submitted to the Permit Issuing Authority [40 CFR 122.22]

c. Changes to authorization: If an authorization under paragraph (b) of this section is no longer accurate because a different individual or position has responsibility for the overall operation of the facility, a new authorization satisfying the requirements of paragraph (b) of this section must be submitted to the Director prior to or together with any reports, information, or applications to be signed by an authorized representative [40 CFR 122.22]

d. Certification. Any person signing a document under paragraphs a. or b. of this section shall make the following certification [40 CFR 122.22]. NO OTHER STATEMENTS OF CERTIFICATION WILL BE ACCEPTED:

"I certify, under penalty of law, that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fines and imprisonment for knowing violations."

6. General Permit Modification, Revocation and Reissuance, or Termination

The issuance of this general permit does not prohibit the Permit Issuing Authority from reopening and modifying the general permit, revoking and reissuing the general permit, or terminating the general permit as allowed by the laws, rules, and regulations contained in Title 40, Code of Federal Regulations, Parts 122 and 123; Title 15A of the North Carolina Administrative Code, Subchapter 2H .0100; and North Carolina General Statute 143-215.1 et al.

After public notice and opportunity for a hearing, the general permit may be terminated for cause. The filing of a request for a general permit modification, revocation and reissuance, or termination does not stay any general permit condition. The Certificate of Coverage shall expire when the general permit is terminated.
7. **Certificate of Coverage Actions**
Coverage under the general permit may be modified, revoked and reissued, or terminated for cause. The notification of planned changes or anticipated noncompliance does not stay any general permit condition [40 CFR 122.41(f)].

8. **Annual Administering and Compliance Monitoring Fee Requirements**
The permittee must pay the administering and compliance monitoring fee within 30 (thirty) days after being billed by the Division. Failure to pay the fee in timely manner in accordance with 15A NCAC 2H.0105(b)(2) may cause this Division to initiate action to revoke coverage under the general permit.

**SECTION C: OPERATION AND MAINTENANCE OF POLLUTION CONTROLS**

1. **Proper Operation and Maintenance**
The permittee shall at all times properly operate and maintain all facilities and systems of treatment and control (and related appurtenances) which are installed or used by the permittee to achieve compliance with the conditions of this permit. Proper operation and maintenance also includes adequate laboratory controls and appropriate quality assurance procedures. This provision requires the operation of back-up or auxiliary facilities or similar systems which are installed by a permittee only when the operation is necessary to achieve compliance with the conditions of this permit [40 CFR 122.41(e)].

2. **Need to Halt or Reduce Not a Defense**
It shall not be a defense for a permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the condition of this general permit [40 CFR 122.41(c)].

3. **Bypassing of Stormwater Control Facilities**
Bypass is prohibited and the Director may take enforcement action against a permittee for bypass unless:
   a. Bypass was unavoidable to prevent loss of life, personal injury or severe property damage; and
   b. There were no feasible alternatives to the bypass, such as the use of auxiliary control facilities, retention of stormwater or maintenance during normal periods of equipment downtime or dry weather. This condition is not satisfied if adequate backup controls should have been installed in the exercise of reasonable engineering judgment to prevent a bypass which occurred during normal periods of equipment downtime or preventive maintenance; and
   c. The permittee submitted notices as required under, Part III, Section E of this general permit.

If the Director determines that it will meet the three conditions listed above, the Director may approve an anticipated bypass after considering its adverse effects.

**SECTION D: MONITORING AND RECORDS**

1. **Representative Sampling**
Samples collected and measurements taken, as required herein, shall be characteristic of the volume and nature of the permitted discharge. Analytical sampling shall be performed during a measurable storm event. Samples shall be taken on a day and time that is characteristic of the discharge. All samples shall be taken before the discharge joins or is diluted by any other waste stream, body of water, or substance. Monitoring points as specified in this general permit shall not be changed without notification to and approval of the Permit Issuing Authority [40 CFR 122.41(j)].
2. **Recording Results**
For each measurement or sample taken pursuant to the requirements of this general permit, the permittee shall record the following information [40 CFR 122.41]:

a. The date, exact place, and time of sampling or measurements;
b. The individual(s) who performed the sampling or measurements;
c. The date(s) analyses were performed;
d. The individual(s) who performed the analyses;
e. The analytical techniques or methods used; and
f. The results of such analyses.

3. **Flow Measurements**
Where required, appropriate flow measurement devices and methods consistent with accepted scientific practices shall be selected and used to ensure the accuracy and reliability of measurements of the volume of monitored discharges.

4. **Test Procedures**
Test procedures for the analysis of pollutants shall conform to the EMC regulations published pursuant to NCGS 143-215.63 et. seq, the Water and Air Quality Reporting Acts, and to regulations published pursuant to Section 304(g), 33 USC 1314, of the Federal Water Pollution Control Act, as Amended, and Regulation 40 CFR 136.

To meet the intent of the monitoring required by this general permit, all test procedures must produce minimum detection and reporting levels and all data generated must be reported down to the minimum detection or lower reporting level of the procedure. If no approved methods are determined capable of achieving minimum detection and reporting levels below general permit discharge requirements, then the most sensitive (method with the lowest possible detection and reporting level) approved method must be used.

5. **Representative Outfall**
If a facility has multiple discharge locations with substantially identical stormwater discharges that are required to be sampled, the permittee may petition the Director for representative outfall status. If it is established that the stormwater discharges are substantially identical and the permittee is granted representative outfall status, then sampling requirements may be performed at a reduced number of outfalls.

6. **Records Retention**
Qualitative monitoring shall be documented and records maintained at the facility along with the Stormwater Pollution Prevention Plan (SPPP). Copies of analytical monitoring results shall also be maintained on-site. The permittee shall retain records of all monitoring information, including

- all calibration and maintenance records,
- all original strip chart recordings for continuous monitoring instrumentation,
- copies of all reports required by this general permit,
- copies of all data used to complete the Notice of Intent to be covered by this general permit.

These records or copies shall be maintained for a period of at least 5 years from the date of the sample, measurement, report or Notice of Intent application. This period may be extended by request of the Director at any time [40 CFR 122.41]. If this volume of records cannot be maintained on-site, the documents must be made available to an inspector upon request as immediately as possible.

7. **Inspection and Entry**
The permittee shall allow the Director, or an authorized representative (including an authorized contractor acting as a representative of the Director), or in the case of a facility which discharges through a municipal separate storm sewer system, an authorized representative of a municipal operator or the separate storm sewer system receiving the discharge, upon the presentation of credentials and other documents as may be required by law, to:

a. Enter upon the permittee's premises where a regulated facility or activity is located or conducted, or where records must be kept under the conditions of this general permit;
b. Have access to and copy, at reasonable times, any records that must be kept under the conditions of this general permit;
c. Inspect at reasonable times any facilities, equipment (including monitoring and control equipment), practices, or operations regulated or required under this general permit; and
d. Sample or monitor at reasonable times, for the purposes of assuring permit compliance or as otherwise authorized by the Clean Water Act, any substances or parameters at any location [40 CFR 122.41(i)].

SECTION E: REPORTING REQUIREMENTS

1. Discharge Monitoring Reports

Samples analyzed in accordance with the terms of this general permit shall be submitted to the Division on Discharge Monitoring Report (DMR) forms provided by the Director. DMR forms are available on the Division’s website (http://portal.ncdenr.org/web/lr/npdes-stormwater). Submittals shall be delivered to the Division no later than 30 days from the date the facility receives the sampling results from the laboratory.

When no discharge has occurred from the facility during the report period, the permittee is required to submit a discharge monitoring report, within 30 days of the end of the specified sampling period, giving all required information and indicating “NO FLOW” as per NCAC T15A 02B .0506.

If the permittee monitors any pollutant more frequently than required by this general permit using test procedures approved under 40 CFR Part 136 and at a sampling location specified in this general permit or other appropriate instrument governing the discharge, the results of such monitoring shall be included in the data submitted on the DMR.

The permittee shall record the required qualitative monitoring observations on the SDO Qualitative Monitoring Report form provided by the Division and shall retain the completed forms on site. Qualitative monitoring results should not be submitted to the Division, except upon DWQ’s specific requirement to do so. Qualitative Monitoring Report forms are available at the website above.

2. Submitting Reports
Two signed copies of Discharge Monitoring Reports (DMRs) shall be submitted to:

Central Files
Division of Water Quality
1617 Mail Service Center
Raleigh, North Carolina 27699-1617

3. Availability of Reports
Except for data determined to be confidential under NCGS 143-215.3(a)(2) or Section 308 of the Federal Act, 33 USC 1318, all reports prepared in accordance with the terms shall be available for public inspection at the offices of the Division. As required by the Act, analytical data shall not be considered confidential. Knowingly making any false statement on any such report may result in the
imposition of criminal penalties as provided for in NCGS 143-215.6B or in Section 309 of the Federal Act.

4. Non-Stormwater Discharges
If the storm event monitored in accordance with this general permit coincides with a non-stormwater discharge, the permittee shall separately monitor all parameters as required under all other applicable discharge permits and provide this information with the stormwater discharge monitoring report.

5. Planned Changes
The permittee shall give notice to the Director as soon as possible of any planned changes at the permitted facility which could significantly alter the nature or quantity of pollutants discharged [40 CFR 122.41(l)]. This notification requirement includes pollutants which are not specifically listed in the general permit or subject to notification requirements under 40 CFR Part 122.42 (a).

6. Anticipated Noncompliance
The permittee shall give advance notice to the Director of any planned changes at the permitted facility which may result in noncompliance with the general permit [40 CFR 122.41(l)(2)].

7. Spills
The permittee shall report to the local DWQ Regional Office, within 24 hours, all significant spills as defined in Part IV of this general permit. Additionally, the permittee shall report spills including: any oil spill of 25 gallons or more, any spill regardless of amount that causes a sheen on surface waters, any oil spill regardless of amount occurring within 100 feet of surface waters, and any oil spill less than 25 gallons that cannot be cleaned up within 24 hours.

8. Bypass
Notice [40 CFR 122.41(m)(3)]:
   a. Anticipated bypass. If the permittee knows in advance of the need for a bypass, it shall submit prior notice, if possible at least ten days before the date of the bypass; including an evaluation of the anticipated quality and affect of the bypass.
   b. Unanticipated bypass. The permittee shall submit notice within 24 hours of becoming aware of an unanticipated bypass.

9. Twenty-four Hour Reporting
   a. The permittee shall report to the central office or the appropriate regional office any noncompliance which may endanger health or the environment. Any information shall be provided orally within 24 hours from the time the permittee became aware of the circumstances. A written submission shall also be provided within 5 days of the time the permittee becomes aware of the circumstances.

   The written submission shall contain a description of the noncompliance, and its causes; the period of noncompliance, including exact dates and times, and if the noncompliance has not been corrected, the anticipated time compliance is expected to continue; and steps taken or planned to reduce, eliminate, and prevent reoccurrence of the noncompliance [40 CFR 122.41(l)(6)].

   b. The Director may waive the written report on a case-by-case basis for reports under this section if the oral report has been received within 24 hours.

   c. Occurrences outside normal business hours may also be reported to the Division’s Emergency Response personnel at (800) 662-7956, (800) 858-0368 or (919) 733-3300.

10. Other Noncompliance
The permittee shall report all instances of noncompliance not reported under 24 hour reporting at the time monitoring reports are submitted [40 CFR 122.41(l)(7)].

11. **Other Information**
Where the Permittee becomes aware that it failed to submit any relevant facts in a Notice of Intent to be covered under this general permit, or submitted incorrect information in that Notice of Intent application or in any report to the Director, it shall promptly submit such facts or information [40 CFR 122.41(l)(8)].
PART IV  DEFINITIONS

1. **Act**

2. **Adverse Weather**
   Adverse conditions are those that are dangerous or create inaccessibility for personnel, such as local flooding, high winds, or electrical storms, or situations that otherwise make sampling impractical. When adverse weather conditions prevent the collection of samples during the sample period, the permittee must take a substitute sample or perform a visual assessment during the next qualifying storm event. Documentation of an adverse event (with date, time and written narrative) and the rationale must be included with your SPPP records. Adverse weather does not exempt the permittee from having to file a monitoring report in accordance with the sampling schedule. Adverse events and failures to monitor must also be explained and reported on the relevant DMR.

3. **Allowable Non-Stormwater Discharges**
   This general permit regulates stormwater discharges. Non-stormwater discharges which shall be allowed in the stormwater conveyance system are:
   a. All other discharges that are authorized by a non-stormwater NPDES permit.
   b. Uncontaminated groundwater, foundation drains, air-conditioner condensate without added chemicals, springs, discharges of uncontaminated potable water, waterline and fire hydrant flushings, water from footing drains, irrigation waters, flows from riparian habitats and wetlands.
   c. Discharges resulting from fire-fighting or fire-fighting training, or emergency shower or eye wash as a result of use in the event of an emergency.

4. **Best Management Practices (BMPs)**
   Measures or practices used to reduce the amount of pollution entering surface waters. BMPs may take the form of a process, activity, or physical structure. More information on BMPs can be found at: [http://cfpub.epa.gov/npdes/stormwater/menuofbmps/index.cfm](http://cfpub.epa.gov/npdes/stormwater/menuofbmps/index.cfm).

5. **Bypass**
   A bypass is the known diversion of stormwater from any portion of a stormwater control facility including the collection system, which is not a designed or established operating mode for the facility.

6. **Bulk Storage of Liquid Products**
   Liquid raw materials, manufactured products, waste materials or by-products with a single above ground storage container having a capacity of greater than 660 gallons or with multiple above ground storage containers located in close proximity to each other having a total combined storage capacity of greater than 1,320 gallons.

7. **Certificate of Coverage**
   The **Certificate of Coverage** (COC) is the cover sheet which accompanies a general permit upon issuance and lists the facility name, location, receiving stream, river basin, effective date of coverage under the general permit and is signed by the Director.

8. **Clean Water Act**
   The Federal Water Pollution Control Act, also known as the Clean Water Act (CWA), as amended, 33 USC 1251, et. seq.

9. **Division or DWQ**
   The Division of Water Quality, Department of Environment and Natural Resources.

10. **Director**
The Director of the Division of Water Quality, the permit issuing authority.

11. **EMC**
The North Carolina Environmental Management Commission.

12. **Grab Sample**
An individual sample collected instantaneously. Grab samples that will be analyzed (quantitatively or qualitatively) must be taken within the first 30 minutes of discharge.

13. **Hazardous Substance**

14. **Landfill**
A disposal facility or part of a disposal facility where waste is placed in or on land and which is not a land treatment facility, a surface impoundment, an injection well, a hazardous waste long-term storage facility or a surface storage facility.

15. **Measureable Storm Event**
A storm event that results in an actual discharge from the permitted site outfall. The previous measurable storm event must have been at least 72 hours prior. The 72-hour storm interval may not apply if the permittee is able to document that a shorter interval is representative for local storm events during the sampling period, and obtains approval from the local DWQ Regional Office. Two copies of this information and a written request letter shall be sent to the local DWQ Regional Office. After authorization by the DWQ Regional Office, a written approval letter must be kept on site in the permittee’s SPPP.

16. **Municipal Separate Storm Sewer System (MS4)**
A stormwater collection system within an incorporated area of local self-government such as a city or town.

17. **No Exposure**
A condition of no exposure means that all industrial materials and activities are protected by a storm resistant shelter or acceptable storage containers to prevent exposure to rain, snow, snowmelt, or runoff. Industrial materials or activities include, but are not limited to, material handling equipment or activities, industrial machinery, raw materials, intermediate products, by-products, final products, or waste products. DWQ may grant a No Exposure Exclusion from NPDES stormwater permitting requirements only if a facility complies with the terms and conditions described in 40 CFR §122.26(g).

18. **Notice of Intent**
The state application form which, when submitted to the Division, officially indicates the facility's notice of intent to seek coverage under a general permit.

19. **Permit Issuing Authority**
The Director of the Division of Water Quality (see “Director” above).

20. **Permittee**
The owner or operator issued a Certificate of Coverage pursuant to this general permit.

21. **Point Source Discharge of Stormwater**
Any discernible, confined and discrete conveyance including, but not specifically limited to, any pipe, ditch, channel, tunnel, conduit, well, or discrete fissure from which stormwater is or may be discharged to waters of the state.

22. **Representative Outfall Status**
When it is established that the discharge of stormwater runoff from a single outfall is representative of the discharges at multiple outfalls, the DWQ may grant representative outfall status. Representative outfall status allows the permittee to perform analytical monitoring at a reduced number of outfalls.

23. **Secondary Containment**
Spill containment for the contents of the single largest tank within the containment structure plus sufficient freeboard to allow for the 25-year, 24-hour storm event.

24. **Section 313 Water Priority Chemical**
A chemical or chemical category which:
   - Is listed in 40 CFR 372.65 pursuant to Section 313 of Title III of the Superfund Amendments and Reauthorization Act (SARA) of 1986, also titled the Emergency Planning and Community Right-to-Know Act of 1986;
   - Is present at or above threshold levels at a facility subject to SARA title III, Section 313 reporting requirements; and
   - Meets at least one of the following criteria:
     - Is listed in appendix D of 40 CFR part 122 on Table II (organic priority pollutants), Table III (certain metals, cyanides, and phenols) or Table IV (certain toxic pollutants and hazardous substances);
     - Is listed as a hazardous substance pursuant to section 311(b)(2)(A) of the CWA at 40 CFR 116.4; or
     - Is a pollutant for which EPA has published acute or chronic water quality criteria.

25. **Severe Property Damage**
Substantial physical damage to property, damage to the control facilities which causes them to become inoperable, or substantial and permanent loss of natural resources which can reasonably be expected to occur in the absence of a bypass. Severe property damage does not mean economic loss caused by delays in production.

26. **Significant Materials**
Includes, but is not limited to: raw materials; fuels; materials such as solvents, detergents, and plastic pellets; finished materials such as metallic products; raw materials used in food processing or production; hazardous substances designated under section 101(14) of CERCLA; any chemical the facility is required to report pursuant to section 313 of Title III of SARA; fertilizers; pesticides; and waste products such as ashes, slag and sludge that have the potential to be released with stormwater discharges.

27. **Significant Spills**
Includes, but is not limited to: releases of oil or hazardous substances in excess of reportable quantities under section 311 of the Clean Water Act (Ref: 40 CFR 110.3 and 40 CFR 117.3) or section 102 of CERCLA (Ref: 40 CFR 302.4).

28. **Stormwater Discharge Outfall (SDO)**
The point of departure of stormwater from a discernible, confined, or discrete conveyance, including but not limited to, storm sewer pipes, drainage ditches, channels, spillways, or channelized collection areas, from which stormwater flows directly or indirectly into waters of the State of North Carolina.

29. **Stormwater Runoff**
The flow of water which results from precipitation and which occurs immediately following rainfall or as a result of snowmelt.

30. **Stormwater Associated with Industrial Activity**
The discharge from any point source which is used for collecting and conveying stormwater and which is directly related to manufacturing, processing or raw material storage areas at an industrial site. Facilities considered to be engaged in "industrial activities" include those activities defined in
40 CFR 122.26(b)(14). The term does not include discharges from facilities or activities excluded from the NPDES program.

31. **Stormwater Pollution Prevention Plan (SPPP)**
A comprehensive site-specific plan which details measures and practices to reduce stormwater pollution and is based on an evaluation of the pollution potential of the site.

32. **Total Maximum Daily Load (TMDL)**
TMDLs are written plans for attaining and maintaining water quality standards, in all seasons, for a specific water body and pollutant. A list of approved TMDLs for the state of North Carolina can be found at [http://portal.ncdenr.org/web/wq/ps/mtu/tmdl](http://portal.ncdenr.org/web/wq/ps/mtu/tmdl).

33. **Toxic Pollutant**
Any pollutant listed as toxic under Section 307(a)(1) of the Clean Water Act.

34. **Vehicle Maintenance Activity**
Vehicle rehabilitation, mechanical repairs, painting, fueling, lubrication, vehicle cleaning operations, or airport deicing operations.

35. **Visible Sedimentation**
Solid particulate matter, both mineral and organic, that has been or is being transported by water, air, gravity, or ice from its site of origin which can be seen with the unaided eye.

36. **25-year, 24-hour Storm Event**
The maximum 24-hour precipitation event expected to be equaled or exceeded, on the average, once in 25 years.
What activities are covered by this general permit?

NCG210000 allows stormwater discharges associated with establishments primarily engaged in manufacturing Timber Products [standard industrial classification (SIC) 24] and activities deemed by DEMLR to be similar in the process and/or the exposure of raw materials, products, by-products, or waste materials. In 2011, the general permit was modified to cover discharges from Wood Chip Mills, which were previously excluded. Excluded: Wood Kitchen Cabinets [SIC 2434], Wood Preserving [SIC 2491], and Logging [SIC 2411].

What are the key permit requirements?

- Implement a Stormwater Pollution Prevention Plan (SPPP) (Part II, Section A).
- Provide secondary containment for all bulk storage of liquid materials (Part II, Section A, 2.(b)).
- Perform and document qualitative monitoring during a measurable storm event (Part II, Section C).
- Perform analytical monitoring twice per year if storing exposed accumulations of sawdust, wood chips, bark, mulch, or like materials on site for more than seven (7) days, and submit the results on the monitoring report forms provided with the permit (Part II, Section B).

What has changed since the last renewal?

Some of the major changes since the last renewal include:

- Refinements and clarifications to the SPPP requirements; refer to Part II, Section A.
- Provisions to allow permittees to petition the DEMLR Regional Office Supervisor for relief from monitoring.
- It should be easier for monitoring to take place during a measurable storm event (new term) rather than a representative storm event (old term); refer to Part II, Section B.
- The requirement for twice per year monitoring of pH has been eliminated; refer to Part II, Section B.
- The TSS benchmark has been lowered to 50 mg/L for discharges into some especially sensitive waters; refer to Part II, Section B.
- The tiered response structure has been modified to allow the DEMLR Regional Office Supervisor to grant relief from Tier Two monthly monitoring; refer to Part II, Section B.

What are BMPs and why are they important?

The SPPP should include “Best Management Practices” (BMPs) to control discharge of pollutants from a facility's stormwater outfalls. BMPs include a variety of things that help minimize the potential for pollutants to get into the stormwater draining from a facility. There are different types of BMPs:

Non-structural (practices or activities) BMPs include:

- Eliminating exposure of materials and equipment wherever possible by moving them to indoor locations.
- Practicing good housekeeping on-site. Handle and store materials at the facility in an orderly fashion.
- Exchanging hazardous materials for non-hazardous ones wherever possible.
- Establishing routine leak & maintenance checks to minimize chance of spills. Clean up spills immediately.
- Establishing bulk storage tank protocols that minimize the risk of spills during loading and unloading.
- Store used pallets and process waste dumpsters inside or under roof so water can’t flow on or around them.

Structural (equipment or devices) BMPs include:

- Containment dikes around the loading areas of bulk liquid storage containers.
- Changing painting operations from liquid systems to powdered systems that do not generate solvent waste.
- Roofs and secondary containment around materials stored outside so that stormwater cannot contact them.
Could I be exempted from an NPDES stormwater permit?

Possibly. A facility with industrial activity subject to the NPDES Stormwater regulations that eliminates all potential stormwater exposure may be eligible for a No Exposure Exclusion from a permit. A facility that meets this condition may submit a No Exposure Certification application (see our website below).

What if I sell my business, or the name changes?

This change is a minor modification and requires the Director's action to transfer permit coverage. Complete the Name/Ownership Change Form SWU-239, is available on our website:

http://portal.ncdenr.org/web/lr/npdes-stormwater

Do I have to monitor all the outfalls?

Yes. However, you may request Representative Outfall Status (ROS). If approved, this status allows analytical monitoring at fewer outfalls. To request ROS, submit a ROS Request Form SWU-ROS to the DEMLR Regional Office. The form is available on our website (see above).

Does a certified lab need to analyze my samples?

Monitoring under all NPDES permits must be conducted in accordance with test procedures approved under federal regulations in 40 CFR §136. Labs certified by North Carolina perform analysis in accordance with those procedures. N.C. certification requirements do not apply to stormwater only discharges, but data gathered under an NPDES permit must conform to federal requirements. Using a certified lab is one way to ensure compliance. A list of certified labs is available at:

http://portal.ncdenr.org/web/wq/lab/cert/

How big of a pile triggers monitoring?

The permittee must perform analytical monitoring if the facility stores exposed accumulations of sawdust, wood chips, bark, mulch, or similar materials for longer than seven (7) days. The permit does not specify a size threshold because a large area covered in “small mounds” could impact stormwater as much as one large pile. If reasonable judgment tells you there are piles on site, monitoring is required unless that material is removed within a week. Also, removing only the top portion of piles and leaving significant amounts of the material on the bottom does not satisfy the monitoring exemption. Furthermore, in some cases NCDENR may determine leachate from such piles is a wastewater. The facility should prevent discharge of pile leachate as much as possible.

Do I have to keep a record of every little piece of sawdust to prove I don’t have to monitor?

No. However, if the facility “opts out” of analytical monitoring because it removes piles within a week’s time, DWQ expects the facility to keep a record of when the material was generated, and when and how it was removed to demonstrate short periods of storage.

If I’m sampling my discharge, do I do qualitative monitoring at the same time?

Yes.

Who can I call with questions?

Please contact Stormwater Permitting Program staff at the office nearest your location. Help is also available from the NCDENR’s Division of Environmental Assistance and Customer Service at 1-877-623-6748.

Total Event Precipitation (inches): __________

Was this a “Representative Storm Event” or “Measureable Storm Event” as defined by the permit? (See information below.)

☐ Yes  ☐ No

Please verify whether Qualitative Monitoring must be performed during a “representative storm event” or “measureable storm event” (requirements vary, depending on the permit).

Qualitative monitoring requirements vary. Most permits require qualitative monitoring to be performed during a “representative storm event” or during a “measureable storm event.” However, some permits do not have this requirement. Please refer to these definitions, if applicable.

A “representative storm event” is a storm event that measures greater than 0.1 inches of rainfall and that is preceded by at least 72 hours (3 days) in which no storm event measuring greater than 0.1 inches has occurred. A single storm event may contain up to 10 consecutive hours of no precipitation.

A “measurable storm event” is a storm event that results in an actual discharge from the permitted site outfall. The previous measurable storm event must have been at least 72 hours prior. The 72-hour storm interval does not apply if the permittee is able to document that a shorter interval is representative for local storm events during the sampling period, and the permittee obtains approval from the local DWQ Regional Office.

**Part A: Stormwater Benchmarks and Monitoring Results** (Monitoring is required only if the facility stores exposed accumulations of sawdust, wood chips, bark, mulch, or other similar material on site for longer than seven (7) days.)

<table>
<thead>
<tr>
<th>Outfall No.</th>
<th>Date Sample Collected¹ (mo/dd/yr)</th>
<th>24-hour rainfall amount, Inches²</th>
<th>Chemical Oxygen Demand</th>
<th>Total Suspended Solids</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Benchmarks ===&gt;&gt;</strong></td>
<td>-</td>
<td>-</td>
<td>120 mg/L</td>
<td>100 mg/L or 50 mg/L⁴</td>
</tr>
</tbody>
</table>

¹ Monthly sampling (instead of semi-annual) must begin with the second consecutive benchmark exceedance for the same parameter at the same outfall.

² For sampling periods with no discharge at any single outfall, you must still submit this discharge monitoring report with a checkmark here.

³ The total precipitation must be recorded using data from an on-site rain gauge. Unattended sites may be eligible for a waiver of the rain gauge requirement.

⁴ See General Permit text, Table 3, identifying the especially sensitive receiving water classifications where the more protective benchmark applies.

---

**Note:** Results must be reported in numerical format. For example, do not report **Below Detection Limit, BDL, <PQL, Non-detect, ND, or other similar non-numerical format.** When results are below the applicable limits, they must be reported in the format, “<XX mg/L”, where XX is the numerical value of the detection limit, reporting limit, etc. in mg/L.

---

**Note: If you report a sample value in excess of the benchmark, you must implement Tier 1, Tier 2, or Tier 3 responses. See General Permit text.**
